

BMC^{CAST}

Centralizing Your Biometric Identity Management

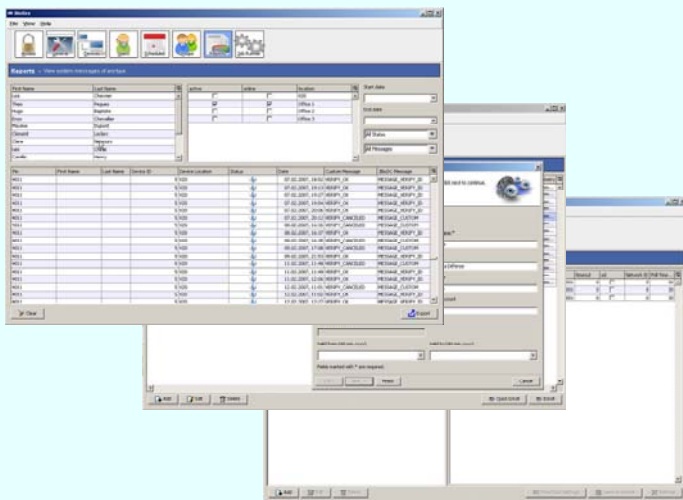

BMCast Develops Software for Managing Biometric Devices

BMCast GmbH is a start-up company from the University of Zurich, Switzerland. BMCast is specialized in software engineering.

The main product of BMCast is a tailored software solution to control and administrate heterogeneous biometric devices for access control and SSO. To offer complete biometric access control solutions to our costumers, BMCast works closely with different system integrators.

With BioXes different biometric devices can be controlled and administrated.

BioXes offers a intuitive user interface.

BioXes is a Software Solution to Adminstrate Multibiometry

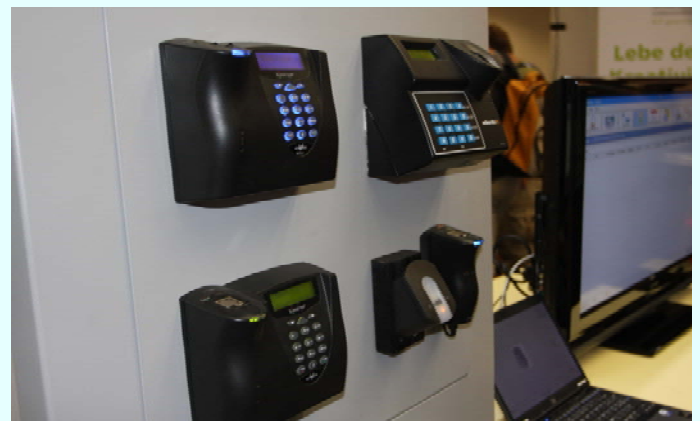

BioXes Business Edition runs with many biometric devices **out-of-the-box**. This simplifies the management of access rights and device maintenance. The core functionality of BioXes Business Edition is:

- Management of users and biometric devices
- Enrollment of biometric data
- Distribution plan for access right management
- Reporting
- Interfaces to and from other 3rd party applications

Customer-Specific Solutions for your Individual Needs

Today's IT solutions must be integrable in existing application landscapes. Therefore BMCast offers an integration platform. Existing software solutions can access BioXes through a SDK and consequently integrate biometric support.

BMCast provides integration services, where experienced developers design and implement customer-specific solutions for your individual needs.

Different biometric devices managed with BioXes.
